

GLOBAL LOGISTICS & TRANSPORT MANUAL

Comprehensive Operations Standard: Canada & European Union

Version 5.0 (Integrated Edition)

Document Control: GLO-MASTER-2026-V5

Effective Date: May 28, 2026

Classification: Highly Confidential / Internal Only

Jurisdiction: North American & European Combined

TABLE OF CONTENTS

- Regulatory Framework & Licensing
- Cargo Integrity & Technical Handling
- Dispatch Excellence & KPI Management
- Regional Cross-Border Operations
- Fleet Safety, Tech & Driver Welfare
- Client Relations & Financial SLA

1. Regulatory Framework & Licensing

1.1 Mandatory Qualifications

- EU Operations:** Drivers must hold a valid **Certificate of Professional Competence (CPC)** and keep their Driver Card for the Smart Tachograph (v2) present at all times.
- Canadian Operations:** Full compliance with the **National Safety Code (NSC)**. Medical examinations are required every 5 years (under 45) or 2 years (45+).

1.2 Driving Hours & Fatigue Management

Regulation	Canada (Federal Cycle 1)	European Union (Driving Time)
Daily Driving	13 Hours Max	9 Hours (10h allowed 2x/week)
Mandatory Break	30 mins after 6 hours	45 mins after 4.5 hours
Rest Cycle	10h Off-duty (8 consecutive)	11h Daily rest (9h reduced)

2. Cargo Integrity & Technical Handling

2.1 Loading & Documentation

- **The 6-Photo Rule:** Photos required of 4 cargo sides, the internal bracing/straps, and the final applied security seal.
- **Sealing:** Only **ISO 17712 High Security Seals** are permitted. Seal numbers must match the Bill of Lading (BOL) or CMR Note exactly.
- **Pulping (Cold Chain):** For reefer loads, internal temperature must be probed. Reject any cargo >2°C above set point.

Pallet Management: In the EU, Euro-pallet (EPAL) exchanges must be recorded on a dedicated Pallet Note. In Canada, prioritize CHEP/PECO recovery and logging to avoid asset loss.

3. Dispatch Excellence & KPI Management

3.1 Communication Hierarchy

- **Status 214 Updates:** Required within 15 minutes of Arrival, Loading, Border, and Delivery.
- **Delay Protocol:** Immediate notification to Dispatch if a delay exceeds 15 mins. Client notification must occur at the 30-min mark.

3.2 Routing Standards

Drivers are strictly prohibited from using non-commercial GPS. Use of **Truck-Specific Navigation** is mandatory to account for low-bridge clearances (common in older EU cities) and SPIF weight-compliance routes in Canada (Ontario/Quebec).

4. Regional Cross-Border Operations

- **EU (Internal):** Movement governed by the Single Market. **CMR Notes** are the legal contract of carriage. ATA Carnet required for temporary vehicle import.
- **Canada (Inter-provincial):** Adherence to IFTA (Fuel Tax) and IRP documentation. All US-border prep must include PARS/PAPS barcode verification.

Safety Alert: Multi-manning in the EU requires a 9h rest within a 30h period. Canadian "Personal Use" of a vehicle is capped at 75km per day and must be logged.

5. Fleet Safety, Tech & Driver Welfare

5.1 Advanced Safety Tech (ADAS)

Lane Departure, Collision Mitigation, and Speed Limiters (105km/h Canada / 90km/h EU) are mandatory. Any attempt to bypass electronic logging or safety sensors is grounds for immediate termination.

5.2 Safety Gear & Winter Readiness

- **Mandatory Kit:** High-viz vest, Fire Extinguisher (ABC), Warning Triangle, and DIN 13164 First Aid Kit.
- **Winter tires:** 3PMSF Snowflake symbol tires mandatory in EU alpine zones and Quebec/BC mountain passes.

6. Client Relations & Financial SLA

6.1 Professionalism & Detention

- **Service Level:** "No-Touch" freight is standard. Drivers must remain in the cab unless safety spotting is required.
- **Detention Fees:** Applicable after 2 hours (Canada) or 3 hours (EU). Standard rate of \$75 CAD / €60 EUR per hour applies.
- **Billing:** Signed Proof of Delivery (POD) must be uploaded within 12 hours of completion to trigger the EU VAT reverse-charge or Canadian HST invoicing.
